N-DURON

Batteries built to last for years and years

N-DURON tubular batteries are built specifically to work with inverters, UPS and solar power systems.

Built using tubular plates of pure lead and housed in a shell of virgin polypropylene N-DURON Batteries are rugged, robust, abuse-resistant, and exceptionally durable. The tubular plates are designed to ensure rapid recharge and high durability even through continuous deep discharge cycles. N-DURON Batteries are highly efficient, and ideal for heavy-duty applications with excellent overcharge tolerance and superior performance during long and frequent power cuts. They are available in a wide range of capacities to meet customer requirements.

Ultra-modern Plant

N-DURON Batteries are manufactured at an ultra-modern plant with excellent connectivity to various parts of the country for speedy delivery.

Sophisticated Equipment

The plant is equipped with highly sophisticated machinery to ensure the batteries we produce adhere to industry best standards for quality.
